

The database records the **title**, **authors**, **publisher**, **language**, **year** as well as the **ISBN-10** and **ISBN-13** for each book. A book can have **several authors** but it must have **at least one author**. The database also records **author that currently has no book**. It should also record the **format of the book** (i.e., if the book is **hardcover** or **paperback**). The International Standard Book Number, ISBN-10 or -13, is an industry standard for the **unique identification of books**. **It is possible that the database records books that are not owned by any students** (e.g., because the owners of a copy graduated or because the book was advised by a lecturer for a course but not yet purchased by any student).
