

The database records the **title**, **authors**, **publisher**, **language**, **year** as well as the **ISBN-10** and **ISBN-13** for each book. A book can have **several authors** but it must have **at least one author**. The database also records **author that currently has no book**. It should also record the **format of the book (i.e., if the book is hardcover or paperback)**. The International Standard Book Number, **ISBN-10** or **-13**, is an **industry standard for the unique identification of books**. It is possible that the database records books that are not owned by any students (e.g., because the owners of a copy graduated or because the book was advised by a lecturer for a course but not yet purchased by any student).
